

# Business Plan

Continuous HRSA readiness for Florida's community health centers

---

**Loogo Labs** · Prepared September 29, 2026 · Planning period October 2026 – December 2031

Confidential. Figures are planning estimates from the Deemed Health cost model (*deemed-health-cost-model.xlsx*), to be confirmed with vendor quotes before commitment.

## 1. Executive summary

**Deemed Health** is compliance software for Federally Qualified Health Centers (FQHCs) and Look-Alikes. It shows a health center where it stands against the HRSA Health Center Program requirements **every day, not only at the Operational Site Visit (OSV)**: who is credentialed and privileged, who is enrolled with which payer, who was screened against exclusion lists, what the board approved, which evidence is missing, and what is due next.

The product is being built by Loogo Labs with a small team working alongside a roster of specialized AI engineering agents, under a gated roadmap that puts security and HIPAA controls in place before any real data arrives. The platform core is under construction today (sign-in, tenancy, audit log, and the records framework are built on synthetic data). We will run a paid pilot with two Florida design partners in the second half of 2027 and reach general availability in January 2028, after the SOC 2 Type I report.

**\$953k**

Total cost to launch (Oct 2026 – Dec 2027)

**\$1.15M →  
\$1.43M**

Annual cost to run, 2028 → 2031

**\$2.46M**

Funding required (deepest cash position)

**\$3.03M**

Recommended raise, with a 6-month buffer

- **Market.** About 52 FQHC organizations in Florida (our operating scope). At our list prices that is a serviceable market of about **\$3.00M** in annual subscriptions.
- **Model.** Annual subscription in three tiers (\$36,000, \$60,000, \$96,000) plus a one-time implementation fee. Blended list price \$57,600 per customer per year.
- **Plan.** 8 customers by the end of 2028, 26 by the end of 2031 (50% of the Florida market), reaching \$1.64M ARR.
- **Economics.** The base case turns cash-positive in **2031**. Cumulative cash reaches its lowest point at (\$2.46M).
- **Key strategic point.** Florida alone caps the business at roughly \$3.00M a year. That is enough to build a sustainable company, but only with a lean team and high market share. Growth beyond it requires revisiting the Florida-only decision (roadmap D4), which is the product owner's call (\$13).

## 2. The problem

---

Florida's FQHCs care for well over a million patients a year, many uninsured or on Medicaid. To keep their Health Center Program funding (or Look-Alike designation) and their FTCA malpractice coverage, each must continuously meet the program requirements in the HRSA Health Center Program Compliance Manual (Chapters 3–20) and the FTCA deeming requirements (Chapter 21). HRSA checks this at the Operational Site Visit and through the deeming application.

### What health centers deal with today

- **Scattered evidence.** Credentialing files, board minutes, sliding fee policies, contracts, and screening results live in spreadsheets, shared drives, and separate point tools. Assembling them for an OSV takes weeks.
- **Readiness only at audit time.** Gaps (an expired license, a missed monthly exclusion check, a board approval not in the minutes) are found when the reviewer finds them, when a condition on the award is the cost.
- **Constant regulatory change.** PALs, PINs, Compliance Manual updates, the annual federal poverty guidelines, and UDS manual changes all shift what "compliant" means.
- **Small teams.** A compliance officer often also runs credentialing, risk, and board support, in two languages.

### What a deficiency costs

An OSV finding becomes a condition on the award with a deadline to fix it; unresolved conditions can escalate to restrictions on drawing down funds. Lapsed FTCA deeming exposes the health center and its providers to malpractice liability. A missed exclusion hit can mean repaying Medicare and Medicaid claims. These are existential risks for organizations operating on thin margins.

### 3. The product

Deemed Health maps every HRSA requirement to **evidence, an owner, a cadence, and a status** that is recomputed as data changes. Its principles: readiness is continuous; **AI guides, humans decide** (it never attests, approves, signs, or submits to HRSA); every requirement cites its regulatory source and verification date; requirements are versioned data, not code; every action is written to an append-only audit log; personal data is minimized; the interface is in English and Spanish from day one.

| Module                                     | What it does                                                                              | Release     |
|--------------------------------------------|-------------------------------------------------------------------------------------------|-------------|
| Command Center                             | Daily readiness across every requirement, priorities, what changed                        | MVP         |
| HRSA Readiness                             | Requirement-by-requirement status, evidence library, findings, OSV binder export          | MVP         |
| Providers & Credentialing                  | Provider files, primary source verification, privileges, expirations                      | MVP         |
| Screening                                  | OIG LEIE, SAM.gov, and Florida AHCA exclusion screening, human review of possible matches | MVP         |
| Enrollment                                 | Payer enrollment, reassignment, revalidation, effective dates by provider and site        | MVP         |
| Governance                                 | Board roster and composition, meetings, minutes, approvals, conflict of interest          | MVP         |
| Tasks & Workflows                          | Every action item with owners, due dates, and recorded approvals                          | MVP         |
| FTCA & Risk                                | Deeming readiness, risk assessments, training, incidents, claims, tracking systems        | MVP         |
| Deemed Assistant                           | AI briefs, suggested actions, document intake, cited answers (Claude, under a BAA)        | 2028        |
| Scope & Sites, Contracts, Finance & Grants | Forms 5A/5B/5C, required contract provisions, sliding fee program, budget                 | Next        |
| Quality & UDS, Patient Experience          | QI/QA, UDS readiness and table validation, surveys, grievances                            | Next        |
| Learning, Self-Service, Administration     | Required training, staff and board self-service, users, roles, audit log                  | Next<br>MVP |

**What Deemed Health is not** (decision MR-D0, September 27, 2026): it is not an EHR or ONC-certified health IT, it does not compute UDS tables from patient-level data, and it does not do Medicaid PPS encounter billing. It builds the compliance side of each: UDS readiness and validation of EHR-generated tables, PPS rate, deadline, and reconciliation tracking. This keeps the product focused, keeps PHI to a minimum, and keeps the cost of assurance manageable.

## 4. Market

### Florida first, and Florida only for now

All customers and sites are in Florida (roadmap decision D4). That lets us go deep: the AHCA sanctioned-provider list, Florida DOH license verification, both Florida time zones, Florida privacy and breach law (FIPA), and bilingual English/Spanish operation are built in rather than bolted on.

- ~52 FQHC organizations (HRSA awardees and Look-Alikes)
- Hundreds of service delivery sites statewide
- Buyers: CEO, compliance officer, COO, CMO, credentialing manager
- Channel: Florida Association of Community Health Centers (FACHC) and its conferences

### Market size at our prices

|                                    |                    |
|------------------------------------|--------------------|
| Organizations                      | 52                 |
| Blended list price per year        | \$57,600           |
| <b>Serviceable market (annual)</b> | <b>\$2,995,200</b> |
| Base-case share by end of 2031     | 50%                |

Organization count is a planning estimate; confirm with the HRSA UDS state report for Florida ([data.hrsa.gov](https://data.hrsa.gov)) before external use.

### Competition

| Alternative                          | Where it falls short for an FQHC                                                                               |
|--------------------------------------|----------------------------------------------------------------------------------------------------------------|
| Spreadsheets, shared drives, binders | No cadence, no alerts, no audit trail; OSV prep is manual                                                      |
| Credentialing platforms and CVOs     | Strong on credentialing; do not cover governance, scope, FTCA, sliding fee, or HRSA readiness                  |
| General healthcare compliance suites | Built for hospitals or practices around OIG/OSHA; not mapped to the HRSA Compliance Manual or the OSV protocol |
| Board portals, policy tools, LMS     | One slice each; no link between a board approval and the HRSA requirement it satisfies                         |
| Consultants (mock OSVs)              | A snapshot, not continuous; expensive to repeat. A partner channel for us, not a rival                         |

**Our edge:** the only product whose data model *is* the HRSA requirement set, with cited sources and versioned updates; readiness every day; bilingual; Florida rules built in; and security built for an FQHC's business associate from day one.

## 5. Business model and pricing

| Tier           | Health center size         | Annual subscription | Implementation (one-time) | Planned mix |
|----------------|----------------------------|---------------------|---------------------------|-------------|
| Essentials     | Fewer than 20,000 patients | \$36,000            | \$7,500                   | 40%         |
| Professional   | 20,000 – 60,000 patients   | \$60,000            | \$12,500                  | 40%         |
| Enterprise     | More than 60,000 patients  | \$96,000            | \$20,000                  | 20%         |
| <b>Blended</b> |                            | <b>\$57,600</b>     | <b>\$12,000</b>           | <b>100%</b> |

- All modules, unlimited users, English and Spanish. The Deemed Assistant is included and switched on per health center.
- Annual contracts, invoiced annually in advance; 3% annual price increase from 2029.
- Design partners (2027 pilot): 50% off the first year, implementation fee waived, in exchange for weekly feedback and a written confirmation that statuses matched their records (gate G5).
- Pricing is a hypothesis to validate with the pilots and with FACHC before general availability. Counsel reviews pricing and contracts at G5. Costs such as NPDB query fees and CAQH access stay with the health center.

### Value to the customer

A mid-size health center typically spends on several point tools (credentialing, exclusion screening, board portal, policy management, training) plus staff time and consultant mock site visits. Deemed Health replaces much of that with one system of record and turns weeks of OSV binder preparation into an export. The ROI case is to be quantified with design partners.

## 6. Go-to-market

---

### 2027 · Design partners

- Recruit two Florida health centers (one §330 awardee, ideally one Look-Alike) as paid design partners.
- Weekly reviews; every readiness error is a severity-1 defect with a regression test.
- Build case studies and references in English and Spanish.

### 2028 · General availability

- Hire a sales and partnerships lead with Florida FQHC relationships (Q4 2027).
- FACHC conferences and sponsorships; webinars on OSV readiness and FTCA deeming.
- Referral partnerships with Florida FQHC consultants and CPA firms.

### Sales motion

- Founder-led and relationship-led; 3–6 month sales cycle, often timed to budget periods and upcoming OSVs.
- Entry offer: a free readiness assessment against the Compliance Manual on the health center's own documents.
- Security package for procurement: risk analysis summary, penetration test summary, subprocessor list, SOC 2 report, BAA.

### Retention

- Implementation lead owns onboarding: import with dry run, SSO, roles, training.
- Quarterly readiness reviews with each customer; catalog updates delivered as HRSA changes policy.

## 7. Team and operations

Loogo Labs builds Deemed Health with a deliberately small human team working with a roster of 17 specialized AI engineering agents (architecture, HRSA regulatory analysis, security and privacy, data, backend, frontend, QA, content, integrations, and domain specialists for credentialing, screening, governance, FTCA, and finance). Humans own every decision, approval, and sign-off; the agents draft, build, and test under the same review gates as any engineer. This is why the launch budget is a fraction of a conventional build.

| Role                                                             | Start                  | Why                                                                    |
|------------------------------------------------------------------|------------------------|------------------------------------------------------------------------|
| Founder / CEO, product owner, HIPAA security and privacy officer | Now                    | Decisions, sign-offs, customers, counsel, HRSA contact                 |
| Senior full-stack engineer                                       | Jan 2027               | Reviews and owns production code, AWS, on-call                         |
| Fractional HRSA compliance advisor                               | Now                    | Human verification of every catalog entry and the OSV protocol mapping |
| Fractional CISO / security advisor                               | Jan 2027               | Independent review of controls; G4, SOC 2                              |
| Implementation & customer success lead (bilingual)               | Jun 2027               | Pilot onboarding, training, support                                    |
| Sales & partnerships lead                                        | Oct 2027               | Pipeline for general availability                                      |
| Bilingual implementation & support specialist                    | 2029                   | Scale onboarding past ~10 customers                                    |
| Second engineer                                                  | When ARR passes \$1.5M | Next modules, on-call depth (not in the base-case costs)               |

### Infrastructure

Production runs on AWS under a signed BAA, US regions only (us-east-1 with disaster recovery copies in us-east-2), in isolated production, non-production, and security accounts. Development runs on Netlify and Neon with synthetic data only. The AI provider is Anthropic's Claude API behind a server-side gateway with masking, per-tenant switches, and no training on customer data.

## 8. Roadmap and milestones

Each phase ends at a gate: a checklist of controls that must be finished and proven before the next phase starts or more sensitive data enters the system. Dates below are targets.

| Phase                     | What gets built                                                            | Gate                     | Target            |
|---------------------------|----------------------------------------------------------------------------|--------------------------|-------------------|
| 0 · Foundations           | ADRs, security program, CI guardrails, catalog schema                      | G0 Build-ready           | Q4 2026 (closing) |
| 1 · Platform core         | Shell, identity, tenancy, audit, evidence store, catalog, readiness engine | G1 Platform-secure       | Dec 2026          |
| 2 · MVP modules           | Credentialing, Screening, Enrollment, Governance, Tasks, Command Center    | G2 Feature-complete      | Apr 2027          |
| 3 · FTCA & Risk           | FTCA module and restricted-data handling                                   | G3 Restricted-data-ready | May 2027          |
| 4 · Operational readiness | Production, penetration test, BAA and terms, incident response, insurance  | G4 Ready to operate      | Jun 2027          |
| 5 · Controlled pilot      | Two Florida design partners under BAA; SOC 2 Type I                        | G5 General availability  | Jul – Dec 2027    |
| 6 · Deemed Assistant      | Briefs, suggested actions, document intake, assistant panel                | Per-capability evals     | 2028              |
| 7 · Next modules          | Scope & Sites, Contracts, Finance & Grants, Quality & UDS, and more        | Per-module gates         | 2028 – 2029       |
| 8 · Scale and assurance   | SOC 2 Type II, annual testing, multi-region DR                             | Annual review            | 2028 onward       |

## 9. Cost to launch

Everything required to go from today to general availability: October 2026 through December 2027, covering Phases 1–5 and gates G1–G5. The gate column shows which roadmap gate each item is needed for.

| Item                                                                      | Basis                    | Unit     | Qty | Gate  | Total            |
|---------------------------------------------------------------------------|--------------------------|----------|-----|-------|------------------|
| <b>People</b>                                                             |                          |          |     |       | <b>\$584,541</b> |
| Founder / CEO and product owner (also HIPAA security and privacy officer) | \$120k/yr × 15 mo        | \$10,000 | 15  | All   | \$150,000        |
| Senior full-stack engineer (TypeScript, AWS)                              | \$170k/yr from Jan 2027  | \$14,167 | 12  | P1–P5 | \$170,004        |
| Implementation & customer success lead (bilingual EN/ES, FQHC compliance) | \$95k/yr from Jun 2027   | \$7,917  | 7   | P4–P5 | \$55,419         |
| Sales & partnerships lead (Florida FQHC network)                          | \$105k/yr from Oct 2027  | \$8,750  | 3   | P5    | \$26,250         |
| Payroll taxes and benefits                                                | Load × salaries above    |          |     |       | \$88,368         |
| Fractional HRSA compliance advisor (catalog verification, OSV protocol)   | 20 h/mo × \$150          | \$3,000  | 15  | G0–G5 | \$45,000         |
| Fractional CISO / security advisor                                        | \$3,500/mo from Jan 2027 | \$3,500  | 12  | G1–G5 | \$42,000         |
| Recruiting and background checks                                          | Per hire                 | \$2,500  | 3   |       | \$7,500          |
| <b>Professional services &amp; assurance</b>                              |                          |          |     |       | <b>\$115,500</b> |
| Counsel: MSA, terms of service, customer BAA template, privacy policy     | Fixed fee                | \$20,000 | 1   | G4    | \$20,000         |
| Counsel: Florida privacy and breach memo (FIPA §501.171, §408.051)        | Fixed fee                | \$7,500  | 1   | G4    | \$7,500          |
| Counsel: HRSA, NPDB, and CVO regulatory memos (decision D3)               | Fixed fee                | \$7,500  | 1   | G2    | \$7,500          |
| Counsel: design-partner pilot agreement; pricing and contract review      | Fixed fee                | \$6,000  | 1   | G5    | \$6,000          |
| Counsel: employment, contractor, and IP assignment agreements             | Fixed fee                | \$3,000  | 1   | P1    | \$3,000          |
| Trademark: "Deemed Health" USPTO filing, 2 classes                        | With attorney            | \$2,500  | 1   |       | \$2,500          |
| Independent penetration test, including retest                            | Fixed fee                | \$25,000 | 1   | G4    | \$25,000         |
| Incident response tabletop facilitation                                   | Fixed fee                | \$4,000  | 1   | G4    | \$4,000          |
| SOC 2 Type I audit                                                        | Audit firm               | \$20,000 | 1   | G5    | \$20,000         |
| External WCAG 2.1 AA accessibility audit                                  | Fixed fee                | \$10,000 | 1   | G2    | \$10,000         |

Founder salary can be deferred or accrued to reduce cash needs. Unit costs are planning estimates; confirm legal, audit, penetration test, and insurance items with quotes.

## 10. Cost to run

Annual costs after general availability. Infrastructure, AI, travel, commission, and payment processing scale with the number of customers; everything else is a fixed cost of operating a HIPAA business associate that sells to health centers.

| CRM and sales tools                                        | Annual                          | \$3,600            | \$3,600            | \$3,600            | \$3,600            |
| Payment processing                                         | PayFee × revenue                | \$1,800            | \$3,831            | \$5,860            | \$7,696            |
| Subtotal                                                   |                                 | \$1,044,616        | \$1,186,276        | \$1,251,252        | \$1,296,051        |
| Contingency (10%)                                          |                                 | \$104,462          | \$118,628          | \$125,125          | \$129,605          |
| <b>Total operating cost</b>                                |                                 | <b>\$1,149,078</b> | <b>\$1,304,903</b> | <b>\$1,376,378</b> | <b>\$1,425,656</b> |

**Cost of assurance.** SOC 2, penetration testing, legal, insurance, and compliance tooling are about \$158k a year, a fixed cost that does not shrink with a small customer base. It is also a selling point: FQHC procurement increasingly expects it.

## 11. Financial projections

|                                            | Launch<br>Q4 2026-2027 | 2028                 | 2029                 | 2030                 | 2031                 |
|--------------------------------------------|------------------------|----------------------|----------------------|----------------------|----------------------|
| Revenue                                    | \$28,800               | \$360,000            | \$766,272            | \$1,171,941          | \$1,539,115          |
| Costs                                      | \$953,167              | \$1,149,078          | \$1,304,903          | \$1,376,378          | \$1,425,656          |
| Net cash flow                              | (\$924,367)            | (\$789,078)          | (\$538,631)          | (\$204,437)          | \$113,459            |
| <b>Cumulative cash position</b>            | <b>(\$924,367)</b>     | <b>(\$1,713,445)</b> | <b>(\$2,252,076)</b> | <b>(\$2,456,513)</b> | <b>(\$2,343,053)</b> |
| Customers at year end                      | 2                      | 8                    | 15                   | 21                   | 26                   |
| Recurring revenue at year end (ARR)        | \$115,200              | \$460,800            | \$889,920            | \$1,283,265          | \$1,636,468          |
| Customers needed to cover the year's costs | —                      | 19.9                 | 22.0                 | 22.5                 | 22.7                 |

### Revenue build

|                                | 2027            | 2028             | 2029             | 2030               | 2031               |
|--------------------------------|-----------------|------------------|------------------|--------------------|--------------------|
| Customers at year end          | 2               | 8                | 15               | 21                 | 26                 |
| Average customers              | 1.0             | 5.0              | 11.5             | 18.0               | 23.5               |
| List subscription per customer | \$57,600        | \$57,600         | \$59,328         | \$61,108           | \$62,941           |
| Subscription revenue           | \$28,800        | \$288,000        | \$682,272        | \$1,099,941        | \$1,479,115        |
| New customers                  | 2               | 6                | 7                | 6                  | 5                  |
| Implementation revenue         | \$0             | \$72,000         | \$84,000         | \$72,000           | \$60,000           |
| <b>Total revenue</b>           | <b>\$28,800</b> | <b>\$360,000</b> | <b>\$766,272</b> | <b>\$1,171,941</b> | <b>\$1,539,115</b> |
| Share of the Florida market    | 4%              | 15%              | 29%              | 40%                | 50%                |

Customers are added evenly through each year; pilots convert to full price in January 2028; no churn is assumed in the base case (a lost customer delays break-even by about a year at this scale).

## 12. Funding and scenarios

### Funding requirement

|                                       |                    |
|---------------------------------------|--------------------|
| Launch budget (Q4 2026 – 2027)        | \$953,167          |
| Less pilot revenue (2027)             | (\$28,800)         |
| Operating losses until cash-positive  | \$1,532,145        |
| <b>Funding required</b>               | <b>\$2,456,513</b> |
| Six-month buffer (half of 2028 costs) | \$574,539          |
| <b>Recommended raise</b>              | <b>\$3,031,051</b> |

Sources could combine founder capital, angel or seed investment, and non-dilutive options. Raising in two tranches (launch now; operating runway at G4, once the product is proven on production) lowers dilution.

### Use of launch funds

| Category                          | Amount           | Share       |
|-----------------------------------|------------------|-------------|
| People                            | \$584,541        | 61%         |
| Professional services & assurance | \$115,500        | 12%         |
| Technology & infrastructure       | \$63,900         | 7%          |
| Business operations               | \$22,000         | 2%          |
| Go-to-market                      | \$42,900         | 5%          |
| Contingency                       | \$124,326        | 13%         |
| <b>Total launch budget</b>        | <b>\$953,167</b> | <b>100%</b> |

### Scenarios

| Scenario     | Customers 2028 / 29 / 30 / 31 | ARR end 2031       | 2031 net cash flow | First cash-positive year | Funding required   |
|--------------|-------------------------------|--------------------|--------------------|--------------------------|--------------------|
| Conservative | 5 / 10 / 14 / 18              | \$1,132,939        | (\$331,148)        | After 2031               | \$3,457,444        |
| <b>Base</b>  | <b>8 / 15 / 21 / 26</b>       | <b>\$1,636,468</b> | <b>\$113,459</b>   | <b>2031</b>              | <b>\$2,456,513</b> |
| Upside       | 10 / 18 / 25 / 30             | \$1,888,232        | \$348,791          | 2031                     | \$2,050,142        |

Scenarios change only the customer ramp; prices and costs stay as in the base case. Funding required is the deepest cash position through 2031; in the conservative case losses continue after 2031, so that figure is a floor, not a total.

## 13. Risks and decisions

| Risk                                                                                                      | Mitigation                                                                                                                                                                                            |
|-----------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Small market ceiling.</b> Florida alone is about \$3.00M a year; the base case needs 50% of it by 2031 | Lean team; high retention; decision on expansion (below)                                                                                                                                              |
| Long sales cycles and tight FQHC budgets                                                                  | Design-partner references; FACHC channel; entry readiness assessment; tiers sized to budgets                                                                                                          |
| A readiness status is wrong and a customer relies on it                                                   | Every rule cites a verified catalog entry; human advisor verifies the catalog; readiness is labeled internal, never an HRSA determination; errors are severity-1 with regression tests; E&O insurance |
| Security incident or breach of customer data                                                              | Gated roadmap, encryption, tenant isolation tests, audit log, penetration tests, SOC 2, cyber insurance, tested breach procedure                                                                      |
| HRSA policy changes                                                                                       | Requirements are versioned data; a policy update is a catalog changeset, not a rewrite                                                                                                                |
| AI output is wrong or overreaches                                                                         | AI drafts only; never approves or submits; evals gate each capability; off by default per tenant                                                                                                      |
| Key-person dependency (founder)                                                                           | Documented decisions (ADRs), runbooks, advisors; second engineer once ARR passes \$1.5M                                                                                                               |

### Decisions for the product owner

These are not assumed in the base case. Each needs a decision from the product owner (@jselvalugo).

- 1. Expansion beyond Florida (revisit D4).** The Florida market ceiling is the largest risk to the business. Adding states means a state profile, exclusion adapter, and license source per state, and the upside is large: the same product sells to health centers nationwide. Recommendation: decide by G5 (end of 2027) whether to add a second state in 2029, based on pilot results.
- 2. Founder compensation during launch** (\$150k in the launch budget): pay, defer, or accrue.
- 3. Pricing validation** with design partners and FACHC before general availability.
- 4. Funding path:** one raise of \$3.03M, or two tranches (launch now, runway at G4).

Regulatory statements in this plan are planning assumptions, to be verified against current sources and, where noted in the roadmap, confirmed by counsel. Readiness in Deemed Health is an internal measure and never an HRSA determination or certification.
